

URGENT DESIGN OF YACHT CLUBS

Yacht Club is a public or private organization that combines yachtsmen with or without annual contributions to the club's fund. Yacht clubs are aimed at protecting yachts in the industry, the rights of yachtsmen. They provide a rental of a ship, equipment, repair, provide a place for their parking. The complex of yacht-clubs includes yelling, workshops, berths for mooring and yachting, and mechanisms for lifting and descending ships. They are usually located in the bay or the mouth of the river.

Today, it's the urbanized environment - the place of existence of a modern person. It is characterized by a general deterioration of the ecological situation and in and around large cities: an increase in population, an increase in altitude and density of development, congestion of transport arteries, the release of a huge amount of harmful substances; reduction of natural territories. All this negatively affects the health of the population, the quality of life of citizens and the demographic situation in the country. The level of morbidity and mortality in our country is currently unacceptably high. In the conditions of the emerging need for Ukrainians in effective recreation and overall health is extremely high.

The most effective rest is on the border of two environments (geosystems) - water and land. This is due to the presence of special geo-physical conditions under which recovery of forces and improvement of the human body occurs faster. In addition, the organization of a wider spectrum of recreational activities is possible. In this regard, it seems that one of the promising areas of search can be a vacation "on the water."

In recent decades, due to changes in the life of society and the economy of the country, the nature of the use of water-based sailing sports bases has changed considerably. If in the past the development of coastal areas in most cases was carried out by the state, and established centers of water-sailing sport served as a base for conducting training sessions, sports meetings and competitions, then the initiative has now become the hands of private investors, resulting in demands and to the form and the content of water sailing objects became different.

Existing Yacht Clubs and Centers currently serve a narrow range of customers, not available to most citizens and can not be considered as complete objects of yachting infrastructure.

Functionally, the building, structures and complexes of the yacht club can be divided into two main categories: sports and recreational.

The main task of sports buildings, structures and complexes of yacht-club includes sports training of the population. Sports training can be carried out both at the amateur level and professional.

The function of recreational yacht clubs is to provide the population with various services and forms of leisure.

At the moment, active construction of new yacht clubs is underway, old projects are being modernized, and yacht ports are under construction in built-up cottage settlements. Construction of yacht clubs today is a topical issue.

The yacht club, as an organization, may represent a rather large and multifunctional complex, which includes, besides parking for boats, their winter storage and repair, as well as a shopping and entertainment center with well-developed infrastructure and sports facilities and a school for young yachtsmen. The modern yacht club cultivates not only sailing, but also today presented with motor vehicles.

Today, the development of yacht clubs, which are associated with the active development of marine, river and lake spaces of the country, is becoming increasingly popular. It is a question of getting a profit from renting yachts and creating professional-level databases and yacht schools.
