

EXPERIENCE IN LOGISTICS TRAINING IN UKRAINE

Dovbnya A.O.

National Aviation University, Kyiv

Supervisor –Reznik N.P., PhD, professor

Key words: logistic, supply chain management, labor market

Logistics - is the most important sphere of activity of any production and trading company. Logistics is the production of logistics services, which requires certain engineering knowledge and skills: Technological support of the movement and storage of goods, infrastructure and types of transport, containers and packaging, information technologies, decisionmaking systems, industry specifics, etc., also requires economic, regulatory, organizational and managerial skills.

Economic instability and diversity require training of highly qualified specialists in logistics, because modern methods and principles of supply chain management should be applied to achieve significant results in business activity.

The main feature of professional logics is a combination of diverse knowledge and, in fact, engineering and economic training. It is due to the combination of general and special courses in the educational program that graduates in the direction of "logistics" will have more advantages during POLIT.Challenges of science today. May 2021 employment than graduates with a diploma of related specialties. Three transport universities are engaged directly in the "logistics" direction: The National Aviation University (NAU), the National Transport University (NTU) and the State Economic and Technological University of Transport (DETUT).

Logist on the modern labor market, as already noted, is a very demanding and perspective specialty; therefore, employers need a qualified specialist and high requirements:

- ⇒ Higher logistics education and work experience;
- ⇒ Foreign languages, including English not lower than B2 level;
- ⇒ Free PC ownership: MS office programs, customs declaration programs, transport programs, GPSmonitoring;
- ⇒ Quality of personality. From a logist need communicability, because an employee of such specialty will always interact with people. An integral part of professionalism is creativity and non-standard thinking, determination and ability to overcome difficult and crisis situations. Logist should also be a good organizer: direct and adapt their subordinates. POLIT.Challenges

of science today. May 2021.

Thus, educational institutions of our country in different regions offer many places for applicants who in the future want to link their life with logistics. Also, it should be remembered that the market "looks forward" to the specialist, whose activity will cover a large number of important questions, starting with management of material and technical support of the organization to the organization of strategic planning and management of the corporate logistics system, because such specialty is demanded and highly paid, demand for which grows every day, as well as requirements to specialists.
